Handin assignment

- Make the iterative local search algorithm in the code uploaded for the Quadratic Knapsack problem
- Make the Simulated Annealing algorithm
- Tune the cooling rate and start temperature
- Experiment with different neighbourhoods
- Select a run and show progress graph
- RUN 10 times for 2 seconds to get possible variations
- RUN 10 times for 0.1 second to get possible variations
- Present results, average value, Standard deviation, iteration solution was found in and so forth.
